

ISRAEL ELECTROCHEMICAL SOCIETY (ISEL) NEWSLETTER

17.01.2023

Dear Friends and Colleagues

Following the meeting of Board Members of Israel Electrochemical Society, we would like to inform you about our interest to arrange a special Israeli session at 244th ECS Meeting October 8-12, 2023 | Gothenburg, Sweden, <https://www.electrochem.org/244>

The general topic of our session is: "Electrochemical research and development in Israel towards sustainable future".

We asked the organizers to arrange our session in the framework of Symposium A01 - New Approaches and Advances in Electrochemical Energy Systems.

The symposium focuses on "outside of the box" approaches and developments in materials, components, and systems for addressing the grand challenges in the area of electrochemical energy systems. As a part of this symposium under "Ideas, Interchange & Initiative" (Triple I), abstracts can be submitted based on premature and unexplainable results.

While the A01 Symposium is related to energy systems, the presentations can be focused on wider subjects.

1. Please inform us by email about your willingness to give an oral or poster presentation and the tentative title **until February 1st**. I suppose that we'll have the opportunity to present about 10 lectures under the ISEL umbrella. The number of posters is unlimited.
2. Abstracts are due no later than **Friday, April 7, 2023** at 11:59 PM Eastern Standard Time and should be submitted via ECS website: <https://ecs.confex.com/ecs/244/cfp.cgi>

Cordially yours:

Diana Golodnitsky: golod@tauex.tau.ac.il

Hadar Ben-Yoav: benyoav@bgu.ac.il
